SUMMARY

Software Engineer focused on optimization and backend logic. Proven ability to improve system efficiency and reduce data retrieval times, with experience integrating Generative AI into practical workflows. Strong foundation in data structures, algorithms, and full-stack development, with hands-on experience building scalable and efficient software systems.

EXPERIENCE

Software Development Intern

10Pearls

March 2026 – May 2026, Karachi, Pakistan

- Completed a software development internship at 10Pearls, gaining hands-on experience with real-world software development workflows and engineering practices.
- Contributed to 5+ software tasks involving debugging, feature implementation, testing, and code optimization under senior engineer guidance.
- Collaborated across 3+ development cycles while applying Git workflows, Agile practices, and clean coding standards.
- Strengthened practical skills across 5+ areas including version control, debugging, testing, documentation, and software development processes.

Visiting Faculty

Aptech

May 2025 – January 2026, Karachi, Pakistan

- Instructed 3 core subjects: Web Designing (HTML, CSS, JavaScript), C#, and SQL to over 60 diploma and certificate students as a part-time evening faculty at Aptech.
- Delivered 25+ practical, hands-on sessions focused on current industry tools and real-world applications.
- Mentored 15+ students in developing portfolio-worthy projects, enhancing their employability and technical confidence.

Software Engineer Intern

Wenawa

July 2025 – December 2025, Karachi, Pakistan

- Built multiple full stack projects using Node.js, Java, and Python backends, developing 15+ RESTful APIs for authentication, data handling, and session management.
- Developed frontend features using Vanilla JavaScript and React, creating 20+ reusable components and ensuring responsive performance across devices.
- Fixed 30+ bugs, integrated AI APIs for adaptive functionality, and delivered end-to-end projects independently while managing multiple tech stacks.

PROJECTS

SHIFA | Smart Healthcare Intelligent Forecast Assistant

- Architected a cardiovascular and diabetes-focused healthcare AI platform using RAG, embeddings, and semantic search to deliver personalized insights across 3 languages.
- Engineered scalable pipelines with ingestion, chunking, embeddings, and vector indexing to fetch insights from 1000+ medical records.
- Designed an 8-module AI healthcare framework enabling risk analysis, report interpretation, verification, and context-aware recommendations.

Thread | Multi-Format Adaptive RAG System

- Built a multi-format RAG platform supporting 46+ file types with automated ingestion, chunking, embedding generation, and vector search pipelines.
- Engineered semantic retrieval using Gemini Embeddings, ChromaDB, and conversational memory for context-aware AI responses.
- Developed document intelligence workflows integrating OCR, metadata extraction, similarity search, and retrieval-augmented generation across 4 processing stages.

Lughat | Multilingual PDF Translator

- Developed a multilingual PDF translation platform supporting 2 output formats (PDF/DOCX) with automated extraction, translation, and reconstruction workflows.
- Engineered RTL rendering and bidirectional text-processing pipelines supporting 25+ languages including Urdu, Arabic, Persian, and Turkish.
- Built document processing workflows using PyMuPDF and translation pipelines across 3 stages: extraction, transformation, and export.

EDUCATION

Bachelor of Science in Software Engineering

Hamdard University • Karachi, Pakistan

CERTIFICATIONS

Crash Course on Python – Google

CS50x – Harvard University

Java Certificate – HackerRank

Software Engineering Job Simulation – Electronic Arts

SKILLS

Technical Skills: Node.js, C++, Java, Python, C#, Node.js, MongoDB, React.js, RESTful APIs, JWT authentication, Data Structures & Algorithms, Binary Search, Linked Lists, Full-Stack Development, Git
